Excel vba attach pdf file to email

Vba code to attach excel file to email. Excel vba attach current file to email. Excel vba attach file to email from sharepoint. Excel vba attach pdf file to email.

Please, help me forward all the emails in a saved folder with attachments if any. So use the same method, but provide a solution to format the body body. I have copied some emails from the Outlook inbox to a folder. I need to forward the emails to maintain the format and accessories without changes. EmailITEM.DISPLAY SET EmailItem = Nothing
Set EmailApplication = Nothing
More End Sub
Sub Last Last Edition: November 17, 2020 ordered a bit and moved the Remove file for Sub-mail Sub email from excel more options DIM permlication AS object
Change the attachment directory path here STRPATH = "C:\Scrap\"
Set the email request = createObject ("Outlook.Application")
Set EEMAILITEM = EmailApplication.createitem (0) if Range ("B1"). Value > 0 Then with EMPERRIGHITEM 'A Add more receipt Use the EmailItem.to structure = "email1@test.com; email2@test.com; email3@test.com" .t = range ("C1"). Worth & ";" and Range ("D1"). Value & ";" & Range ("E1"). Value .cc = "Email Electronic1@test.com" .bcc = "Email 0@test.com" .Subject = "Business Line for Electronic Mail" .Body = "The message for email" .Multiple file attaching strfile = dir (strpath & "*" .*) DO While Len (strfile) > 0 .attachments.add strpath & strfile .kill strpath & strfile strfile = dir loop 'shows the email so that the user can can Change it as desired before sending it. I have the next code but it is not working. I want the macro to work and then attach the file and also, you must automatically select "Electronic mail address". 07-04-2013, Å, 11:08 AM # 6 Hello, Thanks for the answer ... but I know how to expand the question for your best understanding. The difference between dream and the It is that a dream without sound is required to see and the other requires insomnia efforts to join us on Facebook 07-04-2013, Å, 7 pm # 8 if you want to send all files in email by email A folder, at an email address (in this case, it will be the address in cell a2), this will work: sub mail_small_text outlook () 'work' work Office 2000-2010 DIM OUTAPP AS OBJECT DUTT EURMAILE AS OBJECT DOT STRBODY AS STRING DOT STRFILE AS STALL SET OVERAPP = CREATEOBJECT ("Outlook.Application") Set outmail = outapp.createitem (0) Strabory Å Å * . * For all STRFILE files = DIR (strpath & "*" .*) DO while Len (strfile) > 0 .attachments.add strpath & strfile strfile = strpath and strfile strfile = electronic screen before sending emailItem.display end With 'Send the email' emailItem.send Set EmailItem = Nothing Silt Next X End Sub End if you consider that in the H2 sheet H2, the name of the company that is established as the variable is displayed Then it is the actual patch for the file located in this folder c: \ users \ IIII \ OneDrive \ Desktop \ Test \ AFTAB currency Exchange UK the macro does not go inside the company folder to choose the file and attach. Do it before the yellow line reaches the line of code with Variable of interest and after the pass it to see what value it has. Sub Email From EXCEL MORE OPTIONS () DIM PAIL LAMPPLACE AS OBJECT DIM EAILITEMA as the object '-> Change the route here strpath = "c:\scrap\" Configure the email request = createObject ("Outlook.Application") Set EEMAILNAME = Evoricido Fieplmption.Createitem (0) (0) Range ("B1"). You can see the previous code. The Code works to complete the electronic mail template, but as soon as I add the .attachment.add does not work, please, help me solve the problem, as it is a project that I am doing and having problems solving it on time. ÅS LTIMO EDITED: November 17, 2020 CEO Format as Currency Click here to disclose the response selection range and press CTRL + SHIFT + 4 to CO cell format Mo currency I need to automate it with Excel VBA to forward those emails to an electronic mail identification that I provide in an Excel sheet cell. I'm also pretty new in VBA. I tried all the techniques I can try, but even so I'm lost. 07-05-2013, 12:12 PM # 10 Morning Malay Unfortunately, I'm not so informed about this topic, since I just needed it to generate new emails. Code: Sub Mail_Small_Text_outlook () 'Working on Office 2000-2010 DIM Outapp as Outmail Dim As Object Dim Strbody as String SetPapp = CreateObject ("Outlook.Application") Set Outmail = Outapp.createitem (0) Sbody = "Hi there" & vbnewline & vbnewline & "Cell A1 is changed" & "This is the line 2" and vbnewline & "This is the line 3" and vbnewline & "this is the line 4" in the next error curriculum with Outmail. A = email email@domain.com 'Electronic mail address (can be a cellular reference) .cc = "" .bcc = "" = "This is the business line" .Body = stringbody .attachments.add ("c:\test.txt") You can add a file like this. Display 'or use .send, ends with On Error GOTO 0 VISION SET = Nothing Set Outapp = Nothing End Sub Any problems give me a scream = D 09-13-2012, 6:2:32 PM # 3 Oh Sorry and the question would be like code: if msgbox ("you want to send an e-mail", vbQuestion + vbYesno, "Send email") = vbno and then exit Sub at the beginning of the code. 07-03-2013, Å Å 01:44 PM # 5 You can add the mail you want to forward to the attachments. Code: Sub Mail_Small_Text_outlook () 'Work in Office 2000-2010 DIM OUTAPP AS Office DOT EURMAIL AS OBJECT DOT STRABING AS START STEP OUTAPP = CREATEOBJECT ("Outloc.Application") Set Outmail = Outapp.createitem (0) Strabory Å Å * . * For all STRFILE STRFILE files Dir (strpath & "*" .*) 'To search for any file located in the subcolette that is searched from Internet Do while Len (strfile) > 0 .attachments.add strpath & strfile strfile = Loop Dir page 2 for the Variable must be at the end. I'm sorry, I lost that point. Sub Electronic_From_EXCEL_MORE_OPTIONS () DIM ELECTRONIC_MAIL_APPLICATION As an object DIM ELECTRONIC_MAIL_APPLICATION AS OBJECT DIM STRPATH AS STRING DIM X as Integer Dim NME as String Dim Strfile as String Set Sectaplaje = CREATEOBJECT ("Outlook.Application") Stable "DB". Select for X = 1 to 1 NME = Range ("H" & x + 1) strpath = ("C:\Users\" & NME & "\OneDrive\Desktop\Test") Electronic mail. = "The message for electronic mail". With email .to = "test@test.org" .cc = "test@test.org" .bcc = "test@test.org" .Subject = "TEST" .HTMLBODY = "TEST" '-> * . * For all STRFILE files = DIR (strpath & "*" .*) DO While Len (strfile) > 0 .attachments.add strpath & strfile strfile = dir loop 'Shows email before sending .Display Finish with 'Send the Electronic Mail' . Send Set Correaticnem = Nothing Set Electronic Mail Application = Nothing Next X End Sub Hi, do not I see where uses a variable in strpath? So, can you help me format the body content body after putting the body content of the mail saved to the new mail body? Thank you. I assumed that it referred to III. but that is the user STRPATH = ("C:\Users\IIIII\OneDrive\Desktop\TEST\" & NME) If the macro starts using the F8 key that passes through each line of the code and stands out in yellow. I'm following his code to send emails. I do not want the dialogue box to locate the folder. If you move over the variables with the mouse, an information about tools will show the value of the variable. Scenario: - I have to send reports to our client, with me Updated (which will be saved on the desktop). I will have a variable location and assign it so that the files are automatically selected from the variable folders. Hello, try the following using the file file dialogue. If possible, a pop-up window to request the user "Did you send an email"? (SHIFT 4 is the \$). Usually, it's a bad idea to say that something can not be done. I have never worked with reading or resending them. This is very useful to confirm what you expect the value of the variable. I have not tried it. It worked well with accessories and format. Hello, I'm not sure to follow, but maybe this is close to the attachment code you want if you change the route to a variable. 07-03-2013, Å, 01:09 PM # 4 Originally Posted by FIEL300 EXCEL ELECTRONIC MAIL hey This is a piece of my reunion file that should work pretty well.
