They contain text, links, and sometimes images, making them universally viewable across systems. However, unlike images, PDFs can't be uploaded to image-based platforms like Instagram. Converting a PDF to an image file like JPG allows you to share the document on social media without issues. This is particularly useful for businesses who want to promote their print advertisements on platforms like Twitter and Facebook. In addition to sharing, converting PDF files can also help reduce file size and make it easier to edit documents in image software like Lightroom or Gimp. To convert a PDF to JPG for free, you can use our online tool. Simply upload your PDF file(s) and choose the "UPLOAD FILES" button. Our tool converts each page of the PDF to one JPG file, which can be downloaded as a ZIP file or individually. We won't store any of your private files. Our server deletes the uploaded PDF and JPG copies just an hour after you send them over. You don't need to worry about us saving anything, because we don't keep records of files converted through our tool. The Portable Document Format (PDF) is a digital replica of a physical document, where all elements are saved as images, including text, graphics, and settings like fonts and layout. With PDFs, you can view, edit, print, or share them just like regular documents. Many programs can open PDF files, with Adobe Reader being the most popular choice from the format's creators. You can also use browser plug-ins or mini-programs embedded in web pages to view PDFs. One great feature of PDFs is that they can contain multiple pages combined into one document, but if you need to turn those pages into separate images, it's easier to convert them to JPGs instead. JPEG files are bitmap images that can be opened with most photo viewing apps and are the most common graphic format online. They use compression technology to take up less space without sacrificing image quality too much, although repeated or aggressive compression can lead to defects. If you need to get separate images of each page as a graphic file, converting PDFs to JPGs is the way to go. Each page will become an image with a .jpg extension after conversion.
