Home » Product Descriptions ImPACT is an objective tool to support trained healthcare providers in making sound return to activity decisions following concussions. It's a computerized test that measures memory, attention span, visual and verbal problem solving. ImPACT quick test is an FDA cleared iPad-based tool that captures objective data at the point of care to help determine if a patient should be removed from activity due to suspected concussion. The ImPACT Passport is a free iPhone or Android concussion care app where you can store your unique 12-digit code assigned after completing an ImPACT, ImPACT Pediatric, ImPACT Quick Test, or Cognitive Impairment Screener (CIS). When it is time to seek care, share your ImPACT Passport ID with your healthcare provider. In addition to storing your ImPACT Passport ID, you can also find a local healthcare provider or record your concussion symptoms from within ImPACT Passport. Everyone plays an important part in concussion care. Contact us to understand your role and how you can help. MAC Alliance healthcare specialists can assess concussions by testing with an FDA-cleared, nationally recognized tool called ImPACT (Immediate Post-Concussion Assessment and Cognitive Testing). With ImPACT, we can measure verbal and visual memory, processing, impulse control and reaction time to see if these areas have been affected. By doing so, we protect patient from serious consequences of returning to regular activities too soon. Our credentialed ImPACT consultants (CIC) are trained in this proven concussion system which is cleared for ages 5-80 and has been administered more than 17 million times. Side effects from concussions can include changes in how the brain functions, such as cognitive issues or slower reaction time. While traditional neurological imaging tests like CT scans can identify serious brain injuries like skull fractures, they do not identify mild traumatic brain injury (TBI) or concussions. Time for Return to Play? ImPACT was developed by a team of neuroscientists at the University of Pittsburgh Medical Center – Center for Sports Medicine. Baseline ImPACT testing documents the healthy brain function of individuals. When these individuals suffer a head injury, post-injury ImPACT testing helps clinicians make accurate concussion treatment decisions. Follow-up tests can be provided over a period of time to continue to track recovery. For individuals who do not have an available baseline test, we can measure post-concussion results against national norms. This popular tool is widely used by thousands of healthcare organizations, high schools and colleges to help diagnose concussion severity. Major league soccer, US lacrosse, the NFL, the NHL and NASCAR also all rely on ImPACT to help determine how quickly athletes can return to play, since recovery can take days or weeks. Findings show that premature return to normal activities like sports programs can lead to potentially serious consequences, and ImPACT continues to partner with scientists to support research on concussions, brain injuries and brain health. ImPACT Concussion Testing Highlights: Computerized cognitive test Fast and easy – about 20 minutes Assesses verbal and visual memory, visual motor speed and more For any individual who has suffered an injury, fall or accident Widely used across the country Available in 22 languages ImPACT Is Featured on the Revolutionary New MAC-Cart ImPACT screenings are part of our portable, affordable new MAC Brain Health Cart. MAC-Cart is a game changer in brain health and concussion baselining testing, diagnosis and treatment. If you are interested in a demo or more information, please call 302-235-8808 or email us. You can also find more details on the MAC-Cart website. The Mid-Atlantic Concussion (MAC) Alliance is a growing network of certified medical practitioners and athletic trainer affiliates located throughout Delaware, Maryland, New Jersey, New York, Pennsylvania and Virginia. For more information on where you can find ImPACT testing or any of the other advanced neurological tools employed by the MAC Alliance, such as RightEye®, BrainScope® One, Brain SPECT Scan, Sway Balance System® and Creyos Health®, visit Find a Mac Center. Home » ImPACT Applications Customer Center ImPACT Passport is a free concussion care app where you can store your unique 12 digit code assigned after completing an ImPACT®, ImPACT Pediatric®, ImPACT Quick Test®, or Cognitive Impairment Screener™ (CIS). When it's time to seek care, share your ImPACT Passport ID with your healthcare provider. Test results can only be viewed in Customer Center the by trained clinicians to keep your information secure. Before you start your ImPACT baseline or post-injury test, make sure you carefully read the instructions and watch the video below. Because concussions can happen to anyone, anywhere. And they can change your life for the worse if you're not prepared. Just like an annual physical, it is recommended that you take a baseline test every year. Take the ImPACT Baseline Test when you're healthy. If you experience a head injury, your baseline scores can help doctors get you back to normal. ImPACT Baseline Test has been developed for ages 12-80. ImPACT Baseline Test is FDA-cleared and available in 22 languages. 1 Take a baseline test Right now, when you're healthy. It takes about 20 minutes. 2 Visit a doctor If you get a head injury and suspect you have a concussion. 3 Take a post-injury test So your doctor can see how your brain function has changed. 4 Get custom treatment Based on how your brain function has been affected after the injury. "I took the ImPACT Baseline Test to provide myself with a starting point in case an accident ever occurs. As a soon-to-be 1st time father, it's important for me to protect my brain." - Richie M. "I took the ImPACT Baseline Test because I live a very active lifestyle. With working out and action sports, you run the risk of accidents, so this was the perfect proactive step in the brain function department!" - Brittney C. "Being an advocate for my own brain health has changed my life since sustaining a life changing concussion. I took ImPACT Baseline Test because I want to be prepared this time if I end up with a concussion again." - Brittany R.
