IntroductionWelcome to this comprehensive guide on how to clean Ruger P-Series pistols. Whether you are a seasoned gun owner or a beginner, proper cleaning and maintenance of your firearm is essential for its longevity and optimal performance. In this guide, we will walk you through the step-by-step process of cleaning your Ruger P-Series pistol, ensuring that it remains in excellent condition.

Overview of Ruger P-Series PistolsDesign and FeaturesThe Ruger P-Series pistols are a line of semi-automatic handguns manufactured by Sturm, Ruger & Company. They were first introduced in the 1980s and quickly gained popularity for their reliability, durability, and affordability. These pistols feature a hammer-fired design with a double-action/single-action trigger system, allowing for both a long, heavy trigger pull for the first shot and a lighter trigger pull for subsequent shots. The P-Series pistols are chambered in various calibers, including 9mm, .40 S&W, and .45 ACP, providing options for different shooting preferences.

Variants and Model DifferencesOver the years, Ruger has produced several variants and models within the P-Series line, each with its own unique features and specifications. Some popular P-Series models include the Ruger P89, P95, and P345. These variants differ in terms of barrel length, magazine capacity, grip design, and overall dimensions. It's important to familiarize yourself with the specific model of your Ruger P-Series pistol, as cleaning procedures may vary slightly between different models.

Popularity and ReputationThe Ruger P-Series pistols have gained a reputation for their ruggedness and reliability. They are known for their ability to withstand harsh conditions and demanding shooting environments. Many law enforcement agencies and military units around the world have used Ruger P-Series pistols due to their reputation for performance and durability. This popularity and reputation have made the P-Series line a popular choice among gun enthusiasts and collectors.

Safety PrecautionsImportance of SafetyBefore we begin the cleaning process, it is crucial to prioritize safety. Always treat every firearm as if it is loaded, even if you believe it to be unloaded. Adhering to proper safety precautions ensures the well-being of yourself and those around you. Always wear eye protection and ear protection when handling firearms, even during cleaning. Establishing a safe and controlled environment for cleaning is paramount.

Checking for Unloaded FirearmBefore any disassembly or cleaning can take place, it is important to ensure that your Ruger P-Series pistol is unloaded. Remove the magazine from the pistol and visually inspect the chamber to ensure there is no ammunition present. Additionally, it is recommended to run your finger inside the chamber to feel for any obstructions. Only proceed with the cleaning process once you have confirmed that the firearm is completely unloaded.

Using a Gun Cleaning MatUsing a gun cleaning mat provides several benefits during the cleaning process. It helps protect your work surface by preventing solvents and oils from damaging the table or countertop. Additionally, it provides a cushioned surface to prevent your firearm from getting scratched or damaged. A gun cleaning mat with a diagram or exploded view of your Ruger P-Series pistol can also serve as a helpful reference during disassembly and reassembly.

Wearing Protective GearWhen cleaning your Ruger P-Series pistol, it is recommended to wear protective gloves. Gloves not only protect your hands from solvents and chemicals but also help prevent oils and residues from transferring onto the firearm. Latex or nitrile gloves provide a good balance of dexterity and protection. Additionally, wearing gloves reduces the risk of accidentally contaminating your skin or inhaling harmful substances.

Necessary Tools and SuppliesTo effectively clean your Ruger P-Series pistol, you will need a few essential tools and supplies. Here are the items you will need for a thorough cleaning:

Cleaning Kit ComponentsA cleaning kit specifically designed for handguns is essential. These kits typically include cleaning rods, jags, brushes, patches, and other tools necessary for disassembly and cleaning. Ensure that the cleaning kit you choose is compatible with your Ruger P-Series pistol and contains the appropriate cleaning supplies.

Solvents and LubricantsUsing the right solvents and lubricants is essential for maintaining your Ruger P-Series pistol. A gun cleaning solvent helps break down fouling and debris, making it easier to remove. Gun oil or lubricant helps reduce friction between moving parts and prevents corrosion. There are many specialized solvents and lubricants available on the market, so be sure to choose products specifically designed for firearms.

Cleaning Brushes and PicksCleaning brushes and picks are used to remove carbon buildup and other debris from hard-to-reach areas of your Ruger P-Series pistol. Nylon brushes are commonly used for general cleaning, while brass brushes can be used for more stubborn fouling. Picks with pointed ends are useful for cleaning out small crevices and corners.

Microfiber ClothA microfiber cloth is ideal for wiping down and polishing various parts of your Ruger P-Series pistol. Its soft texture helps minimize the risk of scratching or damaging the firearm's finish. You can use the microfiber cloth to remove excess solvents, oils, and debris after cleaning.

Bore SnakeA bore snake is a useful tool for quickly cleaning the bore of your Ruger P-Series pistol. It consists of a weighted cord with a cleaning brush embedded in it. Simply thread the cord through the barrel, pull it through, and the embedded brush will clean the bore as it passes through. Bore snakes are especially handy for quick cleanings between shooting sessions.

Q-TipsQ-tips are versatile tools for cleaning hard-to-reach areas, such as the firing pin channel or trigger mechanism. They are particularly useful for applying solvents to specific areas and removing residue or debris.

Other Cleaning AccessoriesDepending on your preferences and cleaning needs, you may also consider using other accessories such as a toothbrush (for scrubbing), a toothpick or dental pick (for precise cleaning), or a compressed air canister (for blowing out debris). These additional tools can help ensure a thorough and effective cleaning process.

Field StrippingThe Ruger P-Series PistolField stripping your Ruger P-Series pistol is the first step in the cleaning process. Field stripping involves disassembling the firearm into its major components, allowing for easier access to clean each part individually. Follow these steps to field strip your Ruger P-Series pistol:

Safety CheckBefore beginning the field stripping process, always perform a final safety check to ensure the firearm is unloaded. Remove the magazine and visually inspect the chamber as outlined earlier.

Removing the MagazinePress the magazine release button located on the grip of your Ruger P-Series pistol to release and remove the magazine. Set the magazine aside in a safe location.

Slide Lock OperationWith the pistol still pointing in a safe direction, pull the slide to the rear and lock it in place by engaging the slide lock. This step is necessary to ensure that the slide is properly aligned for the next step of the disassembly process.

Slide RemovalOn the left side of the pistol, you will find the takedown lever. Rotate the takedown lever clockwise until it stops. While maintaining pressure on the takedown lever, slide the slide forward and off the frame. Be cautious as the recoil spring may be under tension.

Barrel and Recoil Spring RemovalOnce the slide has been removed, you can remove the barrel and recoil spring assembly. Gently pull the barrel and recoil spring forward and out of the slide. Set these components aside for cleaning.

Detailed Cleaning of Each ComponentWith your Ruger P-Series pistol field stripped, you can now begin cleaning each component individually. Pay close attention to the following areas:

Cleaning the BarrelUsing a cleaning rod and a proper caliber-sized jag, attach a cleaning patch soaked in a suitable solvent to the jag. Insert the rod into the breech end of the barrel and push it through until the jag exits the barrel crown. Pull the patch back through the barrel, removing any fouling and debris. Repeat this process with clean patches until they come out relatively clean. For stubborn fouling, use a bronze bore brush in conjunction with the solvent.

Finally, run a dry patch through the barrel to remove any excess solvent.

Cleaning the SlideThe slide is the heart of your Ruger P-Series pistol, housing the firing mechanism and other critical components. Use a cleaning brush or pick along with a suitable solvent to scrub away fouling and debris from the slide, paying attention to grooves, recesses, and other hard-to-reach areas. Be careful not to apply excessive force that may scratch or damage the finish of the slide. After scrubbing, wipe the slide down with a clean cloth to remove any residue or excess solvent.

Cleaning the Trigger and Safety MechanismThe trigger and safety mechanism are critical components of your Ruger P-Series pistol. Use a cleaning brush or pick to clean the trigger guard, trigger, and safety lever. Be careful not to apply excessive force that may damage the firing pin or other components. Once cleaned, wipe the firing pin down with a clean cloth to remove any residue or excess solvent.

Applying Lubrication and ReassemblingAfter thoroughly cleaning each component of your Ruger P-Series pistol, it is time to apply lubrication and reassemble the firearm. Proper lubrication helps reduce friction between moving parts, prevents rust and corrosion, and ensures smooth operation. Follow these steps:

Choosing the Right LubricantSelect a high-quality firearm lubricant that is specifically designed for use on handguns. Avoid using excessive amounts of lubrication, as this can attract dust, dirt, and debris, leading to malfunctions. Apply lubricant sparingly to each moving part and contact surface.

Applying Lubrication to ComponentsBegin by applying a light coat of lubrication to the barrel using a clean cloth or cotton swab. Ensure that the entire surface of the barrel is coated evenly. Next, apply a small amount of lubrication to the slide rails and other contact surfaces. Apply lubrication to the frame, focusing on areas such as the trigger assembly and safety mechanism. Finally, apply a thin coat of lubrication to the recoil spring.

Reassembling the PistolTo reassemble your Ruger P-Series pistol, start by inserting the barrel and recoil spring assembly back into the slide. Ensure that the barrel is properly aligned and seated in the slide. Slide the barrel and recoil spring assembly all the way to the rear of the slide. Align the slide with the frame and insert the slide rails into their respective grooves on the frame. Push the slide forward until it engages the frame and locks in place. Rotate the takedown lever counterclockwise to secure the slide to the frame.

Function TestingOnce reassembled, perform a function test to ensure that your Ruger P-Series pistol is operating properly. Ensure that the slide moves freely, the trigger functions correctly, and the safety mechanisms engage and disengage as intended. Additionally, check that the magazine can be inserted and released smoothly. If you encounter any issues or abnormalities, disassemble and troubleshoot the problem before using the firearm.

Cleaning the ExteriorCleaning the exterior of your Ruger P-Series pistol not only enhances its appearance but also helps protect the finish from corrosion and wear. Follow these steps to clean the exterior of your firearm:

Removing Surface GrimeUse a microfiber cloth or soft brush to remove surface grime, dirt, and fingerprints from the exposed areas of your Ruger P-Series pistol. Pay attention to areas such as the slide, frame, grip, and controls. Gently wipe or brush away any dirt or debris, working from one end of the pistol to the other.

Polishing the SlideTo give the slide of your Ruger P-Series pistol a polished look, use a clean microfiber cloth and a small amount of gun oil or polish. Apply the oil or polish to the cloth and rub it onto the slide in a circular motion. Continue rubbing until the desired shine is achieved, ensuring even coverage. Buff the slide with a clean part of the microfiber cloth to remove any excess oil or polish.

Cleaning the GripTo clean the grip of your Ruger P-Series pistol, use a mild soap or detergent mixed with warm water. Dip a soft brush or cloth into the soapy water and gently scrub the grip, removing any dirt, grime, or oils. Pay attention to areas around the grip panels and checkering. Rinse the grip with clean water and pat it dry with a clean cloth. Once dry, apply a small amount of gun oil or silicone cloth to protect the grip and restore its shine.

Storage and MaintenanceProper storage and regular maintenance are crucial for keeping your Ruger P-Series pistol in optimal condition. Follow these guidelines for storage and periodic maintenance:

Proper StorageStore your Ruger P-Series pistol in a clean, dry location away from excessive humidity, direct sunlight, and extreme temperatures. Consider using a firearm safe or a locking case to protect it from unauthorized access. Store the pistol with the magazine removed, ensuring that it cannot be loaded accidentally. Regularly inspect the firearm for any signs of rust or corrosion, addressing any issues promptly.

Periodic MaintenancePerform regular maintenance on your Ruger P-Series pistol to ensure its reliability and longevity. This includes cleaning the firearm after each use, even if it was not fired, to remove residue and prevent corrosion. Inspect the pistol for any visible wear or damage, paying attention to critical components such as the barrel, slide, and magazine. Regularly replace worn or damaged parts as necessary to maintain optimal performance.

Cleaning FrequencyBased on UsageThe frequency of cleaning your Ruger P-Series pistol depends on how frequently it is used and the overall conditions in which it is used. If your pistol sees regular use, cleaning it after each shooting session is recommended. If it is not used as often, a thorough cleaning every few months is generally sufficient. However, even if your pistol remains unused for an extended period, it is essential to inspect and clean it periodically to ensure it remains in good working condition.

ConclusionCleaning and maintaining your Ruger P-Series pistol is a vital aspect of responsible gun ownership. By following the comprehensive guide outlined in this article, you can ensure that your firearm remains in excellent condition, maintaining its reliability and performance. Remember to always prioritize safety, adhere to proper cleaning procedures, and use high-quality cleaning products and tools. Regular cleaning and maintenance not only extend the lifespan of your Ruger P-Series pistol but also provide you with a well-functioning and dependable firearm for years to come.

The Ruger P95 DC 9mm pistol is one of the more popular handguns manufactured in the United States, and has made a name for itself because of its smaller frame and light weight as a "carry" pistol—the moniker assigned to handguns that are good weapons to carry in a concealed weapon pouch. Because of its simple, modular nature, the Ruger P95 is also a handgun that is relatively easy to disassemble for cleaning and repair. Best of all, the Ruger needs very few tools to be disassembled—or "field stripped"—properly. Items you will need to spread out the towel or cloth on a flat, dry surface. You will be placing all the parts from the disassembled Ruger onto this cloth. Push the magazine eject button at the bottom of the pistol grip and remove the magazine from the Ruger's handle. Place the magazine on the cloth, then slowly pull back on the slide to eject any round that might have been chambered in the pistol barrel. Pull the slide back as far as it will go, then push the slide lock bar—located on the left side of the pistol—up to lock the slide in the open position. Look down into the magazine chamber from the top of the gun—opening the slide will reveal this chamber—and locate the small lever inside the pistol. Press this lever down. Lower the slide lock bar and let the slide come forward just a bit. You will notice there are two notches on the slide that the slide lock bar can be moved up into. The notch farthest back on the slide is the take down notch. Move the slide lock bar up into this notch, then pull back slightly on the slide to relieve the pressure on the slide lock bar. Press the take down pin removal button on the other side of the pistol. It will be a small button located towards the front of the gun. This will pop the slide lock bar and pin out on the other side. Keep holding the slide so that there is no pressure on the pin and lock bar, then pull the pin and lock bar completely out of the pistol. Set the pin and lock bar down on the towel. Let the slide go all the way forward, then grip it firmly and push the slide forward—towards the front of the gun—until it slides off the pistol completely. Lay the plastic lower portion of the pistol on the towel. Hold the slide in your hand and turn it upside down so you are looking into the bottom of the slide. Find the small metal protrusion in the center of the slide—the metal piece connected to the spring and rod—and push it towards the front of the slide, then pull up gently. This will free the rod and spring piece. Set the rod and spring on the towel. Use your finger to pull the barrel up and out of the slide. Place the barrel on the towel. Your Ruger P95 DC is now completely disassembled. Most P95 designs were discontinued in 2004 and 2005, but certain types of the P95 were produced until 2009 and 2013. It is chambered in 9mm with a magazine capacity of 15+1 rounds. Apply solvent to the gun brush and brush all parts of the action. Wipe them dry with a clean cloth. Next, lubricate the moving parts of the action lightly. A... 1. Disassemble (fieldstrip) the pistol to the extent described on pages 16 & 17. 2. Using a cleaning rod, run a solvent-wetted patch through ...Most P95 designs were discontinued in 2004 and 2005, but certain types of the P95 were produced until 2009 and 2013. It is chambered in 9mm with a magazine capacity of 15+1 rounds. If you are on a budget as most people are, I can't think of a single thing I'd consider buying over a Ruger P95. It is reliable enough for MIL and LE work; it is accurate, well made, totally reliable, concealable, high capacity and decent looking.The Ruger P95 is a double action/single action (DA/SA) semi-automatic pistol with an external hammer. It is chambered in 9x19 Parabellum and features a 10+1 or 15+1 magazine capacity.Lasers are still one of the top accessories you can add to your Ruger P95 to enhance the performance of you and the firearm as well. Lasers come in two variants - red and green.The Ruger P95 is a double action/single action (DA/SA) semi-automatic pistol with an external hammer. It is chambered in 9x19 Parabellum and features a 10+1 or 15+1 magazine capacity. It features an ambidextrous magazine release, safety, and decocker.The RUGER® P95™ pistols are chambered for the 9mm x 19 Parabellum (9mm Luger) cartridge. Do not attempt to load any other 9mm cartridges (examples: 9mm short [.380], 9mm Steyr, 9mm Bergmann, etc.) into the magazine or chamber of the pistol.The P95PR was introduced in 2005, it incorporates a Picatinny rail into the frame and adds a new non-slip texturing in the polymer frame. This model replaced the original P95 in production.The RUGER® P95™ pistols are chambered for the 9mm x 19 Parabellum (9mm Luger) cartridge.The Glock is more accurate, but the Ruger has a better trigger pull. The Ruger costs substantially less money than the Glock, but doesn't have the Glock's extensive range of aftermarket accessories. The Ruger was not as mechanically accurate as the Glock. It is, however, almost half the price.Officially the P95 and its variants were discontinued in 2013. The Ruger P95 is a double action/single action (DA/SA) semi-automatic pistol with an external hammer. It is chambered in 9x19 Parabellum and features a 10+1 or 15+1 magazine capacity. It features an ambidextrous magazine release, safety, and decocker.The Glock 19 is also one of the best pistols to pick up if you have plans to customize a pistol. Stippled grips, flared mag wells, machined slides, and nitride-coated barrels all look great on a Glock 19. Also, they're easy to obtain since it's one of the absolute most popular guns to modify.Officially the P95 and its variants were discontinued in 2013. The Ruger P95 is a double action/single action (DA/SA) semi-automatic pistol with an external hammer. So read below and find out which ones are the best ones for your Ruger P95 1. No. 9 Hoppes Gun Cleaner - The best bore cleaner for your Ruger P95 (From \$8.23) Check Details & Availability At Amazon Hoppe's No. 9 lubricating oil is currently the best selling option when it comes to gun cleaning and maintenance tools. What are the best ways to clean a Ruger P95? - Quora Put pressure washer tip at end of barrel then a muzzle two minutes each with dawn dish detergent in mix. ( fast ) then run clean patches down bore until dry and clean.If plastic sabots are used it may be necessary to run vasoline non chlorinated brake cleaner to get plastic out then final cleaning with patches and croil. Cleaning P95 | Ruger Forum RugerP95 said: LMFAO yea that helps, I have all that, but i wish they made a brush the size of a Q tip or small to reach into those hard areas, think what I'm gonna do is buy a few cans of that dust remover that has just air and soak in some G96 then after a few mins blow all the crap out of it!! How to Disassemble a Ruger P95DC 9mm Gun - Gone Outdoors Old towel or soft cloth Step 1 Spread out the towel or cloth on a flat, dry surface. You will be placing all the parts from the disassembled Ruger onto this cloth. Step 2 Push the magazine eject button at the bottom of the pistol grip and remove the magazine from the Ruger's handle. Care And Cleaning - Ruger P95DC Decocker Model Pistols May 10, 2022Using a cleaning rod, run a solvent-wetted patch through the bore several times. Then attach a solvent-wetted bristle brush to the rod and run it back and forth the full length of the bore as many times as necessary to remove grease and dirt from the bore and chamber. Clean bore with dry patches and examine. ruger p95 User Guide - ManualMachine.com 4. For the 9mm P95 pistols, place ten (10) or fewer 9mm x 19 Parabellum cartridges into the magazine from the top. 5. Insert the magazine into the frame, taking care that the magazine is locked in place by the magazine latch. Slamming the magazine into the frame forcibly is not necessary. 6. question on cleaning a ruger p95 | Survivalist Forum question on cleaning a ruger p95. Jump to Latest Follow 1 - 2 of 2 Posts.
